

Meeting the specifications

- Interactive functionality
 - JQuery plugins - we are required to have 2 jQuery plugins
 - Preloading images so the user doesn't experience a lag
 - home.js
 - genres.js
 - topTracks.js
 - personalFav.js
 - newsletter.js
 - Set active tab by altering CSS using javascript
 - Home.js, genres.js, topTracks.js, personalFav.js, newsletter.js, aboutUs.js, podcast.js
 - Hide text before fading in
 - Home.js
 - Fading in the text at different times
 - Home.js
 - BxSlider
 - topTrack.js, personalFav.js
 - Change background color of bxSlider by altering CSS using javascript
 - topTrack.js, personalFav.js
 - Focus on an attribute
 - newsletter.js
 - Validate name and email when submitted button clicked

- newsletter.js
- Query UI Widget - we are required to have 1 jQuery-UI widget
 - Accordion widget
 - Genres.js
- Ajax - we are required to have 2 AJAX requests
 - Load extended json file
 - aboutUs.js
 - Load json files
 - Podcasts.js
- Accessibility principle - we are required to have at least 5 accessibility guidelines
 - Three flashes - webpage does not contain anything that flashes more than three times in any one second period
 - Page titles - webpages have titles that describe topic or purpose
 - Each page at the top clarifies which webpage it is on and there is a short page description on every page
 - Link Purpose - The purpose of each link and be determined from the link text alone.
 - Each link is replaced with words to describe the link connected to the description
 - Multiple Ways - More than one way is available to locate a webpage within a set of pages.
 - Each webpage contains navigation at the top so each webpage is always accessible
 - Consistent Navigation - Navigational mechanisms that are repeated on multiple web pages within a set of webpages

Feedback

- Assignment 2 is where the majority of the feedback helped me update my website in a positive way. One portion of the feedback involved my navigation being inconsistent. I solved this issue by putting the navigation in my header and ensuring that it remained the same on each webpage. Another issue with my initial code was the lack of comments. I combated this problem by adding more comments to each file to ensure that my code is easy to follow and understand. The last recommendation that helped me improve my webpage involved aesthetics. My initial website's color palette was very bland and consisted of mostly tan colors. My current website now has a color palette that is colorful without clashing.

Website success

- The website I created I believe will meet the needs of the client by providing a site where they can stay up to date on current music. The client's initial request was to be presented music broken down by genres and I believe I accomplished that and more by including his favorite songs and podcasts. Regarding future plans for the website, I plan on updating the website continuously to ensure that the music is never outdated but rather current and always accurate.
